

## 2 Channels Telecontrol PWA Series Transmitter and Receiver Board 220VAC 5th Generation

### Key features

- Dual Channel Control: Manage two separate devices independently, enhancing versatility and operational efficiency.
- 220VAC Compatibility: Designed specifically for use with 220VAC electrical systems, ensuring broad applicability.
- Durable Construction: Built to withstand demanding environments, ensuring long-lasting reliability.

### 2 Channels Telecontrol PWA Series Transmitter

The 2 Channels Telecontrol PWA Series Transmitter and Receiver Board (220VAC, 5th Generation) is an advanced remote control solution designed for optimal performance in controlling various electrical devices. This fifth-generation system features dual-channel functionality, allowing users to operate two independent devices seamlessly. With robust construction and user-friendly design, it is ideal for both industrial and residential applications.
