

4 Channels Telecontrol PWA Series Transmitter and Receiver Board 220VAC 4th Generation

Key features

- Four Channel Control: Manage up to four devices independently for maximum flexibility and efficiency.
- 220VAC Compatibility: Designed specifically for seamless integration with 220VAC electrical systems.
- Durable Design: Engineered to withstand harsh environments, ensuring long-lasting reliability.

4 Channels Telecontrol

The 4 Channels Telecontrol PWA Series Transmitter and Receiver Board (220VAC, 4th Generation) is a highly efficient remote control system designed to streamline the management of various electrical devices. This advanced system allows for the independent control of four channels, enhancing versatility and operational efficiency across industrial and residential applications. Built for durability, it ensures reliable performance even in challenging environments.
