

Bearing - Part 24 - for PWK12600i

Key features

- **Enhanced Durability:** Built with robust materials to withstand heavy-duty loads and extend the life of the hoist.
- **Reduced Friction:** Engineered to minimize friction, ensuring smooth rotation and optimal performance.
- **High Load Capacity:** Designed to handle the demanding pressures of hoisting applications, providing reliable support during operation.

Bearing - Part 24 Description

The Bearing (Part 24) for the PWK12600i hoist is a critical component designed to ensure smooth and efficient operation of the hoist's moving parts. This high-quality bearing reduces friction, minimizes wear, and supports heavy loads, contributing to the overall performance and longevity of the hoist system.
