

Flat key - Part 34 - for reducer central shaft of PWK12600i

Key features

- **Precision Fit:** Designed specifically for the reducer central shaft of the PWK12600i, ensuring a perfect fit for efficient power transmission and alignment.
- **Durable Construction:** Made from high-strength, wear-resistant material to handle the stresses of continuous operation in industrial environments.
- **Torque Transfer:** Provides reliable torque transfer between rotating components, ensuring the smooth operation of the hoist.

Flat key - Part 34 Description

The Flat Key - Part 34 for the reducer central shaft of the PWK12600i is a precision-engineered component designed to secure and transmit torque between the central shaft and associated parts in the hoist's reduction gear assembly. This flat key ensures proper alignment and stable operation of the reducer system.
