

Pitman Shaft - Part 48 - Structural steel bar for PWK4300i

Key features

- **Durable Construction:** Made from high-strength steel, the Pitman Shaft offers exceptional durability and resistance to wear, making it ideal for heavy-duty winching operations.
- **Precision Engineering:** Designed to fit perfectly within the PWK4300i Winch, ensuring compatibility and smooth interaction with other winch components.
- **High Load Capacity:** Engineered to withstand high forces and heavy loads, the Pitman Shaft is a critical element in maintaining optimal winch performance under demanding conditions.

Pitman Shaft - Part 48 Description

The Pitman Shaft - Part 48 is a crucial structural component designed specifically for the PWK4300i Winch. This high-strength steel bar plays a vital role in transferring rotational force within the winch system, ensuring smooth and efficient operation. Engineered for durability, the Pitman Shaft is built to withstand high loads and demanding environments, contributing to the overall reliability and performance of the winch.
