

## Joint spline housing - Part 56 - Motor to shaft coupler for PWK4300i

### Key features

- Precision Engineering: Designed with precise dimensions to ensure a perfect fit between the motor and the shaft, minimizing any play or misalignment that could lead to performance issues.
- Durable Construction: Built from high-quality materials to withstand heavy-duty usage, ensuring long-lasting performance under demanding conditions.
- Efficient Power Transfer: Ensures smooth and efficient torque transmission from the motor to the shaft, contributing to the winch's overall performance.
- 3 Year Warranty, Customer Support and Service in the USA

### Joint spline housing - Part 56 Description

The Joint Spline Housing - Part 56 is a crucial component for the PWK4300i winch, serving as the motor-to-shaft coupler. It connects the motor with the shaft, facilitating the transfer of rotational force to power the winch's mechanical components. This part is designed to provide a secure and efficient connection between the motor and the shaft, ensuring optimal performance of the winch system.
